

ECOLOGICAL RESTORATION

Ecological restoration combines the principles of biology, soil science, hydrology, and horticulture to repair compromised, damaged, altered, and destroyed lands. Restoration of this type focuses on reestablishing resilience and sustainability to ecological processes as a means of ensuring the continued health of ecosystems now and into the future.

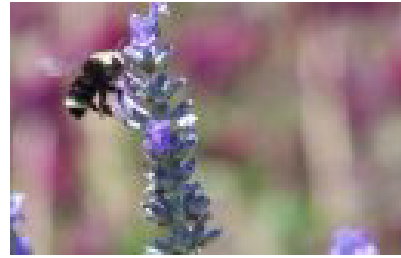

Restoring ecological balance allows landscapes to sustain themselves through natural disturbances and external threats to sustainability for the continued benefit of wildlife, plants, humans, and the planet. This is especially important given changing and unpredictable future environmental conditions, such as those driven by climate change and increasing human encroachment.

BAELIN contracts with both public and private entities to provide ecological restoration services to Sonoma County and the Bay Area.

SUSTAINABLE LANDSCAPING

At BAELIN, we apply the principles of ecological restoration to residential and commercial landscaping in order to save energy, water, and money for our clients. Specifically, sustainable landscaping provides an attractive environment that is in balance with the local climate and requires minimal resources to sustain itself.

SUSTAINABLE DESIGN

Sustainable landscaping begins with the appropriate design. BAELIN can help you improve the sustainability of your landscape by designing a functional, cost-effective, and visually pleasing native, drought-tolerant landscape utilizing smart irrigation technology.

Our design team is comprised of LEED Accredited Professionals and Qualified Water Efficient Landscapers that specialize in energy and water conservation. We will bring our certified green building knowledge and experience to your landscape.

ECO-YARD MAINTENANCE

Maintaining a typical landscape requires many kinds of input: time, money, labor, water, chemicals, and fertilizers. BAELIN is here to help with eco-friendly yard maintenance and landscaping services for Bay Area homes and businesses. This includes using energy efficient, low-emission landscaping equipment, properly maintaining irrigation systems to reduce unnecessary water usage and your water bill, using environmentally safe pest management solutions, composting or recycling all yard waste, and offsetting carbon emissions from our trucks and other equipment.

- 🔗 Weekly, Biweekly and Monthly Service
- 🔗 Drip Irrigation and Sprinkler Repair
- 🔗 Drought-Tolerant Landscaping
- 🔗 Water Conservation Rebate Assistance
- 🔗 Smart Irrigation Installation
- 🔗 Native Grass Lawn Installation
